

INSIGHT PARTNERSHIP PROVIDING TAILORED INTEROPERABILITY AT EVERY LEVEL IN THE NHS

Whether you're looking to increase digital maturity, advance clinical programmes or share data across care settings, our partnership combines deep digital capability with the UK's leading clinical integration expertise, to solve your interoperability challenges through IMX.

HOW WE CAN HELP

DIGITAL MATURITY

Improve digital maturity across systems, places and neighbourhoods. You may be a single trust using an integration engine to deliver clinical messages throughout your organisation; or you could be a group of stakeholders seeking to share information across multiple systems; or you're in a position to implement a regional shared care record.

IMX is designed with multiple entry points to meet any level of digital maturity. No matter where you are in your digital journey, IMX has an interoperability solution for your budget.

CLINICAL PROGRAMMES

Are you seeking solutions to advance clinical programmes such as digital pathology, diabetes or cancer pathways? Whatever your care setting, IMX allows you to choose the right mix of interoperability services to transfer patient information between systems, throughout departments and across organisations.

We tailor our solutions to your exact needs, to put the patient at the heart of the decision making process, improving the quality, safety and outcomes of your clinical programmes.

NHS MERGERS

With mergers planned across NHS trusts, CCGs and primary care organisations, you need an interoperability partner who understands your objectives. IMX enables you to build better integrated and more cost-effective care. We define architecture that works with your existing systems to make sure you're getting the most out of them, whilst leveraging new technology.

Whether you need to merge separate PAS/EPR's, pathology orders and results or documents, IMX enables users in different locations to view the same information about a patient in real-time.

INSIGHT PARTNERSHIP PROVIDING TAILORED INTEROPERABILITY AT EVERY LEVEL IN THE NHS

ABOUT IMX

ReStart's IMX Interoperability Matrix is the only interoperable toolkit of products and services designed specifically to increase digital maturity in the UK health and care market. IMX gives you the freedom to choose any combination of flexible interoperability tools to solve your data sharing challenges.

Whether you want to integrate all your systems at once or add them one by one, you can rely on IMX to provide the right solution to scale at your pace. IMX allows you to Think Big, Start Small and Scale Fast.

KEY FEATURES

OPEN TECHNOLOGY

Standards-based technology makes IMX interoperable with any other system in the health and care market.

SCALABLE

Every service and data source within IMX is independent, to build incremental programmes that realise return on investment, quickly.

SUPPLIER AGNOSTIC

100% technology-agnostic, IMX can integrate any system without costly rip and replace, protecting your previous investments.

FUTUREPROOF INTEROPERABILITY

Whether you need HL7, FHIR, single sign on, or intuitive user interfaces, IMX provides the right solution for you now, and in the future.
